

PaziPagesAI Promo Campaign Manager

One-page print sheet for creating, scheduling, activating, and testing promo campaigns in Supabase.

1. Campaign Setup

Code	_____	Label	_____
Credits each	____ (ex: 1)	Max redemptions	____ (ex: 50)
Active?	☐ true ☐ false	One per email	Yes (built in)
Starts at	____ / ____ / ____ : ____	Expires at	____ / ____ / ____ : ____
Audience/source	_____	Post/channel	_____

2. Supabase Fields to Edit

Field	Example	What it controls
code	LAUNCH50	URL/code people enter: /redeem?code=LAUNCH50
active	true / false	Manual on/off switch for the campaign
credits_per_redemption	1	Free pages each person receives
max_redemptions	50	Stops after this many successful claims
starts_at / expires_at	2026-07-15 09:00	Optional timed start/end window

3. Activate, Pause, or Schedule

Activate now	Set active = true. Confirm starts_at is blank or in the past, and expires_at is blank or in the future.
Pause/stop	Set active = false. Existing private studio links still work if credit sessions are active.
Run for dates	Set starts_at and expires_at using timezone-aware timestamps. Keep active = true during the window.
Extend later	Move expires_at later, or clear it. Increase max_redemptions only if you want more claims.

4. Test Before Posting

☐ Run latest supabase/setup.sql in the shared database.	☐ Set campaign active = true only when ready.
☐ Visit /redeem?code=YOURCODE and redeem with a test email.	☐ Confirm studio link email arrives and opens /generate?token=...
☐ Generate one image and confirm credits_remaining decreases by 1.	☐ Confirm repeated same-email redemption resends link, not a new credit.
☐ Confirm promo stops when active=false, expired, or max redemptions is reached.	Notes: _____

Quick SQL: update public.promo_campaigns set active = true where code = 'LAUNCH50';

Keep production maintenance on until paid pack, promo redemption, recovery email, contact form, and one full image generation all pass.
